DESCRIPTION

A6141 series is a group of positive voltage output, low power consumption, low dropout voltage regulator. It can provide 150mA output current when input / output voltage differential drops to 400mV (V_{OUT}= 5V), and it also provides foldback short-circuit protection, thermal protection and output current limit function. The very low power consumption of A6141 (Iq=2.5uA) can greatly improve natural life of batteries.

A6141 can provide output value in the range of 1.2V~5.0V in 0.1V steps. It also can customize on command.

A6141 includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

A6141 has well load transient response and good temperature characteristic. A6141 uses trimming technique to guarantee output voltage accuracy within±2%.

The A6141 is available in SOT89-3 package.

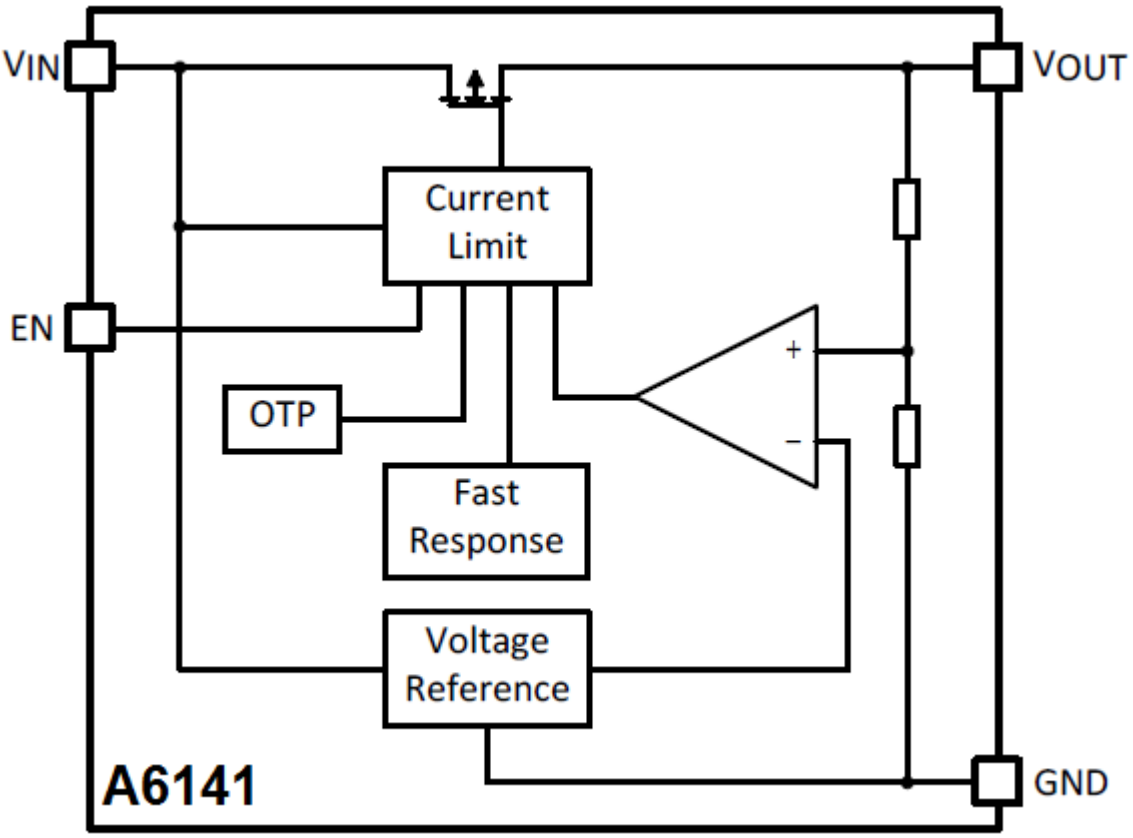
BLOCK DIAGRAM



EXPLANATION

A6141 is a series of low dropout voltage and low power consumption regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 180mA.

A6141 uses trimming technique to assure the accuracy of output value within±2%, at the same time, temperature compensation is elaborately considered in this chip, which makes A6141's temperature coefficient within ±100ppm/℃。
