

Product Features: Small surface mountable, Solid state, Faster time to trip than standard SMD devices,

Lower resistance than standard SMD devices

Operation Current: 0.10A~1.00A Maximum Voltage: 6V_{DC}~24V_{DC} Temperature Range: -40°C to 85°C Applications: All high-density boards

Electrical Characteristics (23°C)

I_H=Hold current-maximum current at which the device will not trip at 23°C still air.

I_T=Trip current-minimum current at which the device will always trip at 23°C still air.

V_{MAX}=Maximum voltage device can withstand without damage at it rated current.(I_{MAX})

 I_{MAX} = Maximum fault current device can withstand without damage at rated voltage (V_{MAX}).

 $\label{power_dissipated} \mbox{Pd=Typical power dissipated-type amount of power dissipated by the device when in the tripped state in 23 ^{\circ}C \ \ still \ air environment.}$

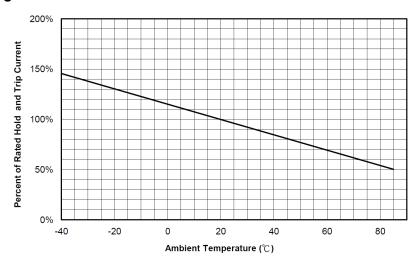

R_{MIN}=Minimum device resistance at 23°C prior to tripping.

 $R1_{\text{MAX}} = \text{Maximum device resistance at } 23^{\circ}\text{C} \ \ \text{measured 1 hour after tripping or reflow soldering of } 260^{\circ}\text{C} \ \ \text{for } 20 \ \text{seconds.}$

Termination pad characteristics

Termination pad materials: Pure Tin

Material Specification

Terminal pad material: Pure Tin

Soldering characteristics: Meets EIA specification RS 186-9E, ANSI/J-std-002 Category 3

Pad Layouts, Solder Reflow and Rework Recommendations

The dimension in the table below provide the recommended pad layout for each F0805L device

Pad dimensions (millimeters)						
Device	Α	В	С			
	Nominal	Nominal	Nominal			
F0805L	1.20	1.00	1.50			

Profile Feature	Pb-Free Assembly		
Average Ramp-Up Rate (Tsmax to Tp)	3°C/second max.		
Preheat:			
Temperature Min (Tsmin)	150°C		
Temperature Max Tsmax)	200°C		
Time (tsmin to tsmax)	60~180 seconds		
Time maintained above:			
Temperature(T _L)	217℃		
Time (t∟)	60~150 seconds		
Peak/Classification Temperature(Tp):	260°C		
Time within 5°C of actual Peak:			
Temperature (tp)	20~40 seconds		
Ramp-Down Rate:	6°C/second max.		
Time 25°C to Peak Temperature:	8 minutes max.		

Note 1: All temperatures refer to of the package, measured on the package body surface.

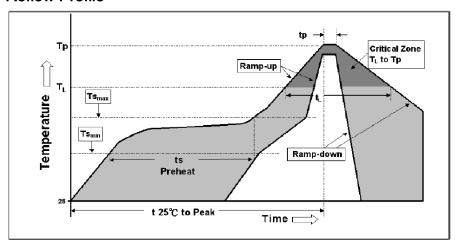

Solder reflow

- Due to "Lead Free" nature, Temperature and Dwelling time for the soldering zone is higher than those for Regular. This may cause damage to other components.
- Recommended max paste thickness is 0.25mm. (Nominal)
- Devices can be cleaned using standard methods and aqueous solvent.
- 3. Rework use standard industry practices.
- 4. Storage Environment: < 30°C / 60%RH

Caution:

- 1. If reflow temperatures exceed the recommended profile, devices may not meet the performance requirements.
- 2. Devices are not designed to be wave soldered to the bottom side of the board.

Reflow Profile

NOTE: Specification subject to change without notice.

Warning:

- Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.
- PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.
- Avoid contact of PPTC device with chemical solvent. Prolonged contact will damage the device performance.
