

**DESCRIPTION**

The AD-IBxxxxLS-1WR3 series is designed for applications in distributed power systems that require the generation of a power supply isolated from the input power. They are suitable for: pure digital circuits, general low frequency analog circuits, relay drive circuits, data exchange circuits, etc.

FEATURES

- High efficiency up to 74%
- I/O Isolation test voltage 1500VDC
- -40°C to +85°C Working Temperature Range
- MTBF ≥3500KHrs
- Output short-circuit, over-current protection
- Industry standard pin-out, Small SIP package, plastic house.

DESIGN REFERENCE

Typical Application

If want to reduce the input and output ripples, can connect a capacitor filter circuit to the input and output. The application circuit is shown in Fig 3 & 4. However, be careful to select the appropriate filter capacitor. If the capacitance is too large, it might cause startup problems.
