

DESCRIPTION

The A6310F is a 3A output current, high PSRR low dropout linear regulator. The A6310F integrate soft-start, under-voltage protection, current limit protection, power-on reset and over-temperature protection. And the A6310F has dual power supplies (a control input for the control circuit and a power input down to 1.05V) for supplying current to the output.

The A6310F input voltage as low as 1.05V at a Vcc voltage of 3V and an adjustable output voltage as low as 0.8V. The ultra-low input and output dropout characteristics to be suitable in applications where the output voltage is very close to the input voltage. The A6310F has an enable control pin, and the current consumption in the shutdown state can be extremely low, with almost no power loss.

The A6310F provides excellent voltage regulation over the entire input, output and operating temperature range.

The A6310F is available in PSOP8 Package.
