

**DESCRIPTION**

AD-FxxxxS-1WR3 series are specially designed for applications requiring an isolated voltage in a distributed power supply system. They are suitable for: The input power voltage is relatively stable circuits, power isolation, and the output ripple noise is relatively insensitive circuits. Including pure digital circuits, general low-frequency analog circuits, relay drive circuits, and data exchange circuits. etc. where the voltage of the input power supply is fixed (voltage variation $\leq \pm 10\%$).

FEATURES

- High efficiency up to 90%
- I/O Isolation test voltage 3000VDC
- -40°C to $+85^{\circ}\text{C}$ Working Temperature Range
- No-load power consumption bottom 0.025W
- MTBF $\geq 3500\text{KHrs}$
- Output short-circuit, over-current protection, and auto-recovery
- Industry-standard pin-out

DESIGN REFERENCE

Typical Application

If want to reduce the input and output ripples, can connect a capacitor filter circuit to the input and output. The application circuit is shown in Fig 3 & 4. However, be careful to select the appropriate filter capacitor. If the capacitance is too large, it might cause startup problems.
